

Amendments to the Claims:

The listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1. (currently amended) An information retrieval system comprising:
a server to transmit at least one piece of audio and/or visual information in a limited space, and transmit relevant information in synchronism with the transmitted audio and/or visual information, the relevant information being related to the transmitted audio and/or visual information; and
a hand-held device capable of ~~two-way~~ communication with the server ~~while the hand-held device is located in the limited space that is a communications area covered by the server, the server transmitting relevant information on the audio and/or visual information to the hand-held device in response to a request made by the hand-held device~~ the hand-held device establishing communication with the server via specific communication means when the hand-held device is located in the communications area, and receiving the transmitted relevant information while the communication between the hand-held device and the server is being established.
2. (cancelled)
3. (original) The information retrieval system according to claim 1, wherein the relevant information includes URL (Uniform Resource Locator) for accessing Web pages.
4. (currently amended) The information retrieval system according to claim 1, wherein the specific communication means is ~~communications between the hand-held device and the server is made under~~ Bluetooth.

5. (original) The information retrieval system according to claim 1, wherein the server further transmits a part of the audio and/or visual information to the hand-held device.

6. (currently amended) An information retrieval system comprising:

a provider ~~an information providing apparatus~~ to transmit at least one piece of audio and/or visual information in a limited space; and

~~an information providing a~~ server capable of two-way communication with the ~~information providing apparatus, provider; and~~

a hand-held device capable of communication with the provider in a communications area covered by the provider, wherein

the provider transmits an identification signal to the server, the identification signal carrying a code peculiar to the audio and/or visual information, the provider receives relevant information sent from the server, the relevant information being related to the audio and/or visual information, and the provider transmits the received relevant information in synchronism with the audio and/or visual information while the audio and/or visual information is being transmitted in the limited space,

on receiving the identification signal, the server retrieves, from a data base, the relevant information corresponding to the code by the identification signal, and transmits the retrieved relevant information to the provider, and

the hand-held device establishes communication with the provider via specific communication means when the hand-held device is located in the communications area, and receives the transmitted relevant information when the communication between the hand-held device and the provider is being established ~~to provide the information providing apparatus with relevant information on the audio and/or visual information in response to at least a request made by the information providing apparatus, the relevant information provided to the information providing apparatus from the server being output in the limited space in synchronism with the audio and/or visual information.~~

7 – 9 (cancelled)

10. (original) The information retrieval system according to claim 6, wherein the relevant information includes URL (Uniform Resource Locator) for accessing Web pages.

11. (currently amended) The information retrieval system according to claim 6, wherein the specific communication means is communications between the hand-held device and the information providing server is made under Bluetooth.

12 – 14 (cancelled)

15. (new) The information retrieval system according to claim 1, wherein the hand-held device is capable of having access to an information source different from the server, in order to gain a detailed information about the audio and/or visual information based on the received relevant information.

16. (new) The information retrieval system according to claim 6, wherein the hand-held device is capable of having access to an information source different from the server, in order to gain a detailed information about the audio and/or visual information based on the received relevant information.
